

Sept 8, 1996

To Whom it May Concern,

We write to thank you
for such a great product.

Our son Douglas was diagnosed
at 8 days of age with Hirschprung's
Disease. At two months he had
surgery and since then he has
suffered from on and off bouts
of diaper rash.

Calmoceptine has aided in
the treatment, as well as say,
prevention of new diaper
irritation. We use the product
by applying a thin layer, after
every diaper change. We are
happy to report that for the last
month Douglas has had a soft,
clear, healthy butt.

I am a neonatal intensive
care nurse and a member of
a 30 person playgroup. I tell all
of the great product.

Rachel
